

Artificial Intelligence • Database Administrator

For Microsoft SQL Server

Update: 2025-01-10
Version 2.2.0

Content

Solution Overview

Hero Features

Support and Assurance

Achievements Unlocked

Real Impact

The fluctuation in database response time causes inconsistent business performance

Continual innovations built into AI-DBA, giving you higher level of stability in business performance

Onboard Expert DBAs

You can perform as good as an expert DBA by few clicks.

- Reduce costs by providing preventive database maintenance.
- Catastrophic problem prediction through Machine Learning.
- Simplify the database administration and SQL Server farm management.
- Control your SQL Server utilization through a centralized portal.
- Get instant access to recommendations.
- Reduce time spent on maintenance and administration.
- View comprehensive reports for resource utilization.
- Automate repetitive processes by utilizing APIs.
- Pay-As-You-Go (PAYG) charging model with zero commitment.

Hero Features

Artificial Intelligence – Database Administrator

New technology with intelligence over all your SQL Server database management process

Intelligence Administration

AI and Machine Learning over all databases with the power of Azure SQL, Python, R, and Azure Cognitive Services

Performance optimization

200 Resource-intensive query optimization within five minutes
~60% Performance Enhancement with zero code changes

Data security

The best of machine learning and abnormal detection on data access and security

Data management

ML and LLM assist data administrators in managing, classifying, and profiling the data assets.

Communication

The first ever system in which humans can communicate and command to perform a task

Extensive knowledgebase

The best internet search, intelligence summarization, and itemization

Ai administration over databases

Preventive maintenance and proactive administration with power of machine learning

Intelligence maintenance window

Exact peak and non-peak hours of SQL Server database instance for better maintenance window allocation

Preventive maintenance

Predict upcoming problems via historical data analyzed in prediction models, and provides workaround instructions and scripts to prevent catastrophic disaster

Proactive administration

Analyzes the statistical data and provides recommendation base on database workload to get utmost from hardware resources

Intelligence high availability

Analyzes the SQL Server instances within the farm, evaluate and recommend for best high availability solution for existing workload and infrastructure

Intelligence consolidation

Evaluate the database workload and compatibility to recommend consolidation for better use of licenses and hardware resources.

Intelligence performance optimization

Gain performance with no app changes with intelligence query optimization

Challenge

DBA's spend most of their time tuning database performance, leading to high operational costs

Solution

Intelligence performance optimization tasks for mission critical databases

Database structure and indexes analysis

Table and index structures are evaluated based on database workload, configuration and queries

Problematic queries revision

Rewrites the long running queries base on best practices, tables structure and indexes.

Expensive query plan resolution

Alters the existing indexes or create new indexes to reduce the cost of query execution and enhances the performance.

You need a system that keeps up your databases with the changing world

The system learns from workload,
predicts catastrophic disasters and
recommends the necessary changes

Intelligence over data security

Prevent data security breach – Always keep a step ahead

Challenge

Identifying vulnerabilities and preventing sensitive data leak requires high-cost solutions

Solution

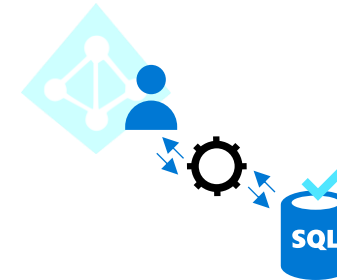

Intelligence features for data access privilege, access pattern analysis and monitoring & alerting

Intelligence abnormal activity detection

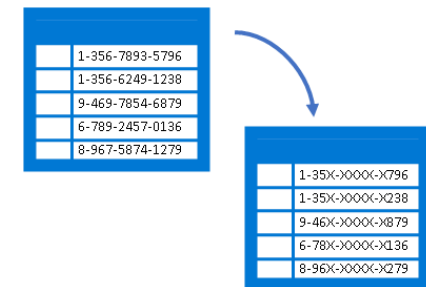

Learns within 3 months and detect abnormalities for existing users within a minute

Active directory synchronization

Synchronizes and validate account session every 30 seconds for linked SQL Server instances

Intelligence data masking

Analyzes and identifies the table columns for data masking based on knowledge base and model

Intelligence over data management

Manage the data assets like a pro

Challenge

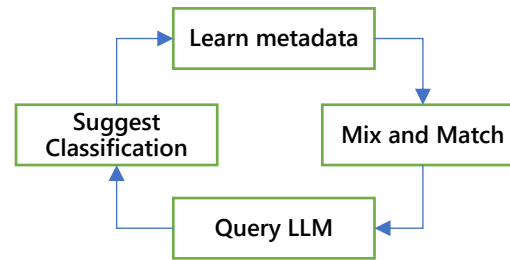

Identifying data classification and data profiling was a huge burden for administrators.

Solution

Intelligence features for data classification, profiling, and live querying.

Intelligence data classification

Learns the underlying metadata and uses LLM to find the most suitable classification.

Data profiling and analysis

Run a smooth data profiling against the underlying tables to understand the data distribution.

Live query terminal

```
SELECT ID,
FIRSTNAME,
LASTNAME
FROM dbo.Personnel
WHERE
FIRSTNAME LIKE 'J%' AND
LASTNAME LIKE 'S%'
```

1-35X->000->X796
1-35X->000->X238
9-46X->000->X879
6-78X->000->X136
8-96X->000->X279

Write administrative queries or select one from the provided templates.

Intelligence communication

First ever system to receive command via natural language

Challenge

DBA in charge is on leave or entity does not have in-house DBA, whilst require to perform basic Adhoc tasks

Solution

Intelligence communication enables human and system collaboration via natural language processing.

Note

- * Certain critical commands will not get process such as DROP DATABASE, DROP TABLE, DROP FUNCTION, SHUTDOWN and etc.
- * Certain authorized users will able to communicate with system.

Intelligence
e-mail processing

Receive and process natural language via E-mail and communicate with user if further information is needed

Intelligence
conversation

Receive and process natural language via the portal and respond based on live data in the internet, and the collected telemetry data

(Available in Private Preview)

Extensive knowledgebase

The best of internet search, intelligence suggestion and self-healing

Challenge

Identifying correct workaround is time consuming and tricky.

DBA might overlook some underlying errors and warnings.

Solution

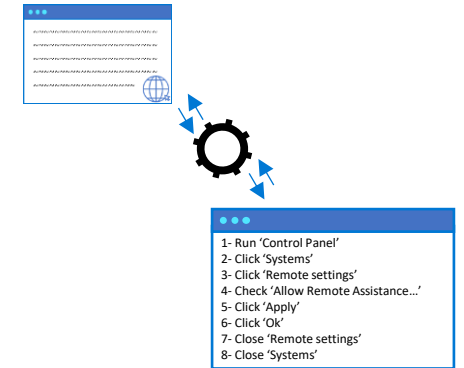

Intelligence features for internet search and self-healing enable the system to identify, search and fix the underneath errors automatically

Intelligence Internet search

Searches internet for a workaround for the errors raised in database or windows server. The web page content is evaluated to assign the relevancy level with the error

Intelligence self-healing

Summarizes and itemize the web page content, the generated action steps are fed to the agent service to apply the workaround automatically

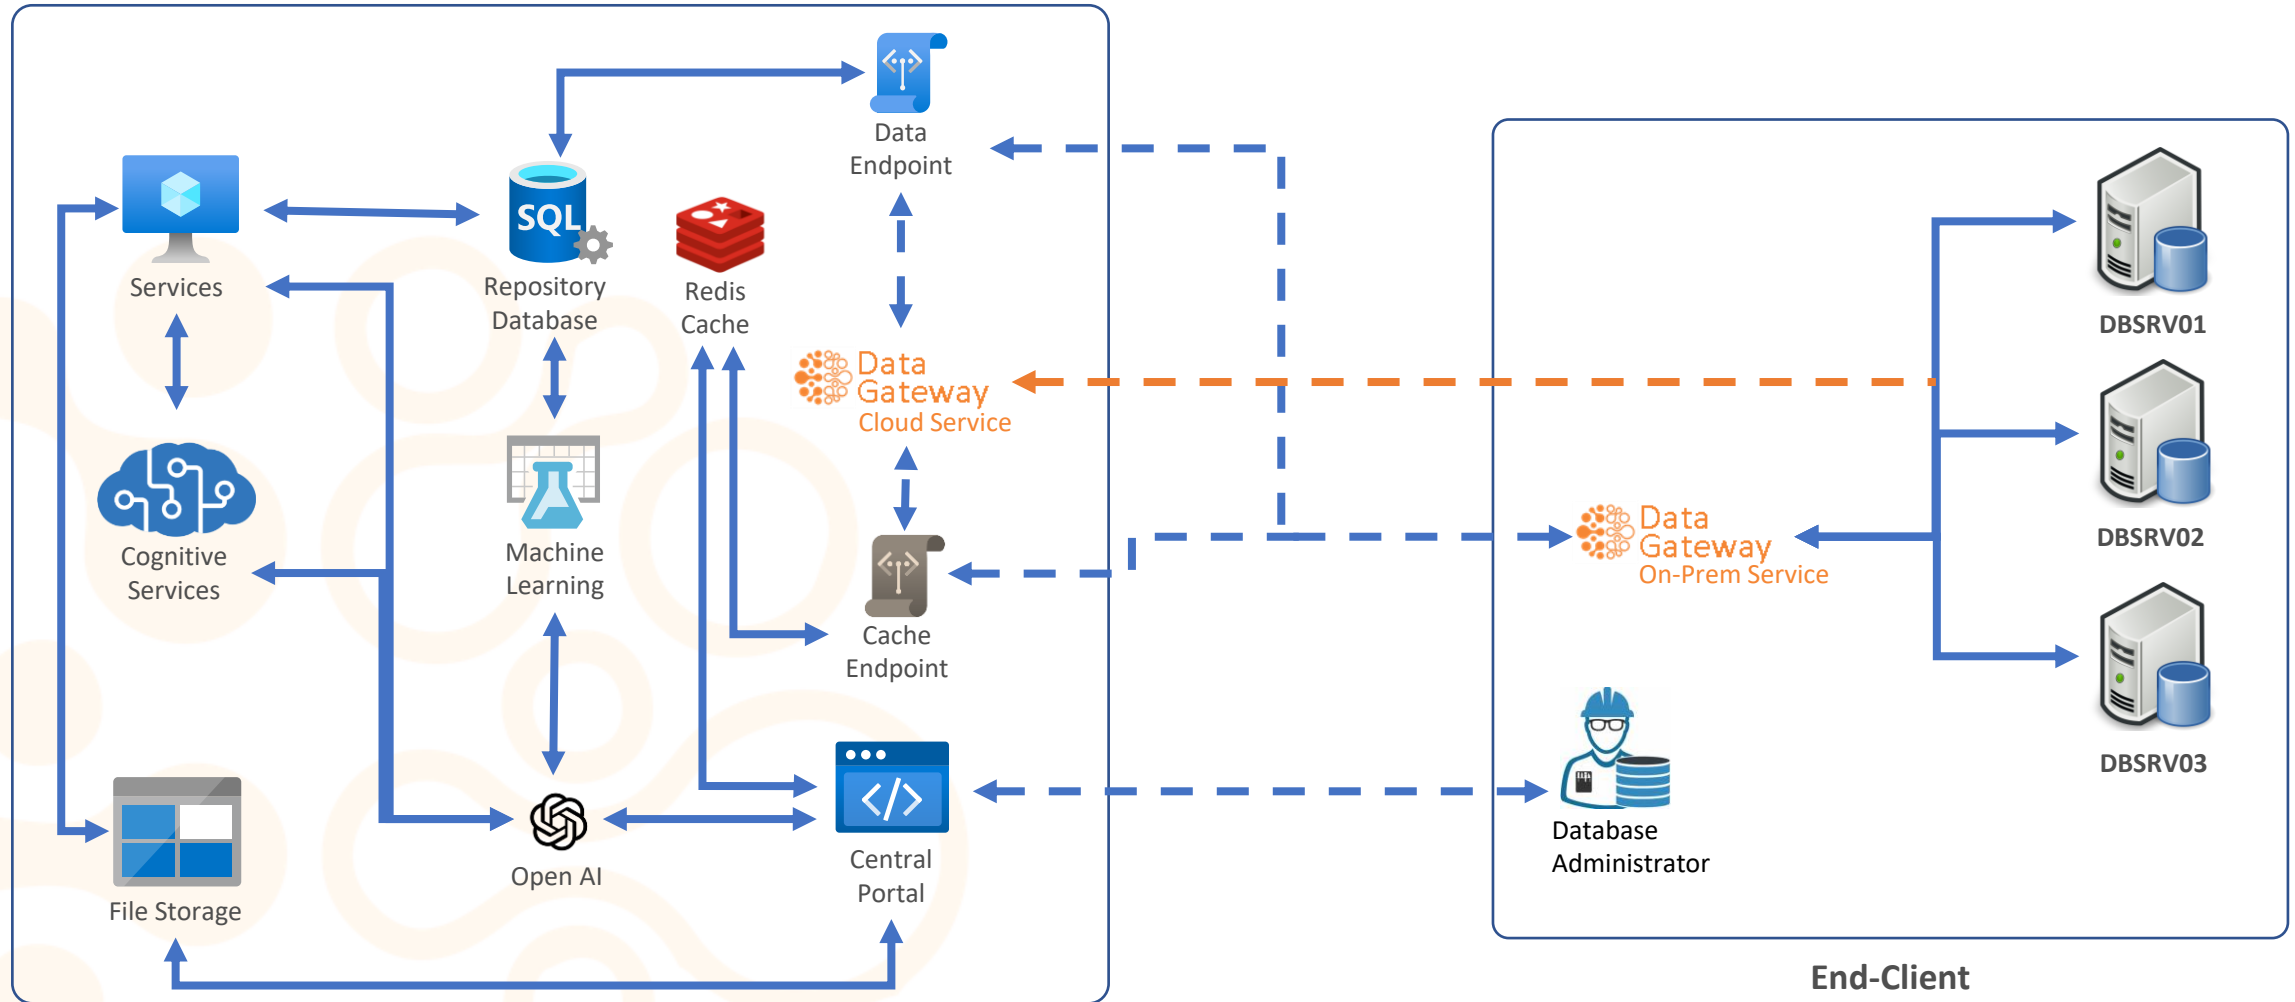

(Available for Private Preview)

Leverage Ai to gain fabulous enhancement

Data Movement and Workflow

Data collection and movement at glance

The Recommendation Platform

Data collection and movement blueprint

Data Sources

- Event Logs
- Traces
- Metrics
- Management Views
- Activities

Services

- Data Gateway

Features

- AI Administration
- Preventive Maintenance
- Security Hardening
- Abnormally Detection
- Performance Tuning
- Prediction & Real-Time Notification
- Automation & Quick Fix

Teams

- Database Administrators
- Database Developers
- Application Developers

Available Regions

Data resides within your region

Regions	North America	Asia Pacific	South America	Africa	Europe
Location	Iowa, United States Montreal, Canada	Singapore	São Paulo State, Brazil	Johannesburg, South Africa	TBD
Data residency	Stored at rest in the United States, Canada	Stored at rest in the Singapore	Stored at rest in the Brazil South	Stored at rest in the South Africa	TBD
Powered by	Microsoft Azure	Microsoft Azure	Microsoft Azure	Microsoft Azure	TBD
Available to	All customers and partners	All customers and partners	All customers and partners	All customers and partners	TBD

Target Platforms

Get all the databases in a good shape and health

Microsoft SQL Server 2005
Microsoft SQL Server 2008
Microsoft SQL Server 2008 R2
Microsoft SQL Server 2012
Microsoft SQL Server 2014
Microsoft SQL Server 2016
Microsoft SQL Server 2017
Microsoft SQL Server 2019
Microsoft SQL Server 2022

Microsoft Azure SQL Managed Instance
Microsoft Azure SQL Database
Microsoft Azure SQL Pool

Google Cloud SQL for SQL Server
Amazon Web Services (AWS) RDS for SQL Server

Free Support and Assurance

Get the best support and advice with zero additional charges

Support or advisory Ticket

We provide support or advisory for purchased subscriptions within 24 hours
The support is in the English language.

Connect with expert engineers

Connect with expert engineers offer unprecedented expertise and education on AI-DBA product. Our engineers openly sharing information with a goal of improving the user experience and product functionalities.

Receive hotfixes

The hotfix is built by developers and applied to identical environment or all existing Ai-DBA services. Hotfixes are tested at engineering lab environment prior release to production.

Achievement Unlocked

You can trust AI-DBA to do the job for you.

Intelligence administration

- 3,681** databases are managed on a daily basis
- 1,574** instances are managed on a daily basis
- 1,263** Catastrophic issues predicted and mitigated
- 17** SQL Server farms evaluated for consolidation
- 481** Pairs of SQL Server instances evaluated for high availability

Choice of target SQL Server

- 3,681** databases are involved
- 84.3%** Mission critical databases
- 15.7%** Cloud hosted

Intelligence performance optimization

- 1,681,579** resource-intensive queries tuned
- Average **57.6%** performance improvement per database

Insights over data security

- 3,875,671** data access patterns learned
- 395,275** abnormal data access identified and alerted

Real Impact

Went Live Seamlessly!

Challenge

IT personnel struggles efficiently monitor and optimize database workload. Difficult to derive practical database proactive and preventive maintenance

Impact

Intelligence preventive maintenance and proactive administration.

Recognition

“The Ai-DBA and services have provided fast and proven recommendations to ensure our biggest Navis N4 SQL Server database project goes live without any major performance and maintenance issues.”

Abdul Rashid Bastami - Head of Applications

Instant Issue Discovery

Challenge

IT personnel and software developers were grapple with inconsistent database performance

Impact

Intelligence performance optimization suggested to redesign database structure, this made a stable database performance

Recognition

"Ai-DBA performed good. Provided quick analysis of what is happening in the database server and recommended on performance optimization as well as best practices on configurations"

Alex Wong - Head of Infrastructure

Phenomenal Database Consolidation

Challenge

Insufficient manpower resources and tight project timeline
Unknown hardware resource capacity utilization by SQL Server instances

Impact

Intelligence consolidation prioritized the database servers and recommended on consolidation approaches to minimize license cost and resource utilization

Tremendous Database Optimization

Challenge

IT personnel struggles efficiently manage databases at scale
Difficult to derive practical performance optimization on databases

Impact

Intelligence performance optimization improved the database response time by 70%.

Recognition

"Ai-DBA has helped us tremendously in managing the databases. With the improved optimal performance of the databases, my team and I can focus on development of the software solutions more."

Yow Hui Hui - IT Manager

SKYNETTM
Your Express Carrier of Choice

Diminishing Resource Utilization

Challenge

Hyperconverged Infrastructure (HCI) resource utilization was extremely high and positioned IT personnel in to having no choice other than expanding hardware resources.

Impact

Intelligence performance optimization diminished resource utilization by 60%, also improved database performance by 40% in overall.

Astonishing Reliability

Challenge

Production line extremely impactful by Microsoft Dynamics AX performance.

IT personnel could not identify and resolve database performance degradation root cause.

Impact

Intelligence administration and performance optimization improved the database response time by 550%.

Recognition

“Ever since we signed our contract, we have managed to keep all ERP systems running 24x7 with total reliability. Thanks to Ai-DBA, also keep our users satisfied.”

Hui Ling See - Head of IT

Enticing Database Corruption Prevention

Challenge

Production line extremely impactful by Microsoft Dynamics AX performance.

Storage issues lead to catastrophic disaster pitfall

Impact

Intelligence administration identified the storage related issues and provided preventive maintenance recommendations to mitigate database corruption.

Amazingly Stabled

Challenge

Production line extremely impacted by instability of database performance and consistency
IT personnel could not identify and resolve database root cause.

Impact

Recommendations given, stabilized the database consistency and improved performance significantly in average at 320%

Inevitable improvements

Challenge

Production database size was huge (2TB) and sometimes cause short of resources due to heavy workload.

Administration tasks were manual and it took majority of IT personnel time.

Impact

The resource utilization has been reduced significantly even though the workload remained the same.

All the administration tasks are automated with zero human intervention.

**BERJAYA SOMPO
INSURANCE**

Day-to-Day Administration

Challenge

Multi-critical database servers with a few available resources. The management decided to outsource the database operation and administration. This negatively impacts the IT department atmosphere.

Impact

The Ai-DBA empowered the IT executives to act as senior database administrators with minimal effort. The system guided and educated the IT personnel related to daily administration chores.

PNB

Keep Everyone Productive

Challenge

The current construction sites are highly dependent on the software and database server performance. Any system performance degradation impacts directly the labor's individual performance and construction progress.

Impact

Imagine what a high-performing database server does to the labor's productivity. All construction progress is updated in real-time without lagging in communication with HQ and engineers.

Sounds Great!

Challenge

The analytical database performance was challenging during month end for campaign analysis and customer presentation.

Impact

The top long-running reports and functions are tuned without significant effort. Just by a few clicks!

Unexceptional Stability

Challenge

The production ERP system is highly critical and any performance degradation or downtime is a big business loss.

Impact

The workload has been optimized and database servers are maintained well to keep the business up and running.

Recognition

Fast response. The support team is professional and knowledgeable and willingly shares it with our internal team.

Alice Alagamal
IT Manager

Outstanding Delivery

Challenge

Since the pandemic, business intelligence reports and dashboards should be accessible from anywhere at any time. However, the migration to the cloud was a big challenge.

Impact

The reports and dashboards are migrated to Azure Synapse and Power BI solution.

Recognition

It was an absolute pleasure to work with Fard Solutions. they listened to our needs and provide us with valuable solutions and suggestions. It was a pleasure to work with them and they are attentive to details and proficient with SQL & Azure Synapse, issues along the way were sorted out quickly and efficiently. The project was delivered with quality and on time.

Goh Boon Ching
Business Intelligence Manager

Try it, it works and you can trust it.
