Castech View Surveillance Features

Full IP, hybrid and digital:

Full IP: These systems use Internet Protocol (IP) technology to transmit video data digitally, allowing for high-quality video, remote access, and integration with other IP devices.

Hybrid: These systems can support both analog and IP cameras, offering flexibility for existing analog setups while allowing for future expansion with IP cameras.

Digital: This term is less specific and can refer to any camera system that uses digital technology for capturing and storing video, unlike older analog systems.

Remote access via smartphone or web browser:

This feature allows you to view live footage and recordings from your cameras remotely using a smartphone app or web browser, regardless of your location.

Simple, yet intuitive, user interface:

This refers to the design of the software interface for controlling the camera system. It should be easy to understand and navigate, even for users with limited technical experience.

Cameras that provide 24/7 color or infrared at night:

24/7 color: These cameras use high-sensitivity sensors and sufficient lighting to capture color video even in low-light conditions.

Infrared at night: When it's too dark for color video, these cameras switch to infrared mode, using invisible infrared light to capture black and white video.

High definition up to 4K:

This refers to the resolution of the video captured by the cameras. Higher resolutions like 4K offer sharper images and more detail, but require more storage space and processing power.

Face detection:

This feature can automatically detect and record when a human face appears in the camera's field of view, useful for identifying individuals and filtering irrelevant footage.

License plate recognition (LPR):

This advanced feature can automatically read and identify license plates of vehicles captured by the cameras, useful for security purposes or access control in parking lots.

Overall:

Based on the features you described, this seems like a comprehensive and versatile security camera system offering remote access, high-quality video, night vision, advanced features like face detection and LPR, and a user-friendly interface. However, it's important to consider
