perché scegliere noi?

WHY CHOOSING US

Rappresentiamo il "Vacuum" nel mondo da oltre 38 anni

We have been representing "Vacuum" in the world for over 38 years.

Nous représentons le "Vacuum" dans le monde entier depuis 38 ans

Representamos el "Vacuum" en el mundo desde más de 38 años

2 Abbiamo da sempre mantenuto invariato un principio: essere produttori di vuoto

We have always maintained unchanged an important principle: to be manufacturers (in all its senses) of vacuum packing machines

On a toujours gardé le même principe: "être des producteurs du vide"

Desde siempre hemos mantenido invariado un valor: somos fabricantes de envasadoras al vacío

3 Produciamo apparecchiature innovative per soddisfare tutte le richieste della clientela più esigente

We produce innovative equipment to fully meet the most demanding customers' requests

On fabrique des machines innovantes pour satisfaire les clients les plus exigeants.

Fabricamos aparatos innovadores para satisfacer las solicitudes del cliente más exigente.

Ciclo marinatura: cos'è?

MARINATING CYCLE. WHAT IS IT? / CYCLE DE MARINADE: C'EST QUOI? / CICLO DE ESCABECHE ¿QUÉ ES?

E' un ciclo di lavoro pre impostato, che consente alla macchina di alternare in modo automatico mini cicli di vuoto e di ripristino della pressione in campana. Attraverso quest'operazione i pori dei prodotti confezionati in busta con il loro condimento, subiscono una sollecitazione di apertura (in fase di ripristino pressione in campana) propedeutica al miglior assorbimento del condimento stesso.

It is a pre-set working cycle that allows the machine to automatically alternate mini vacuum cycles and restorations of pressure in the chamber. Through this operation, the pores of the products packed in the vacuum bag along with their dressing undergo an opening process (the phase of restoration of the pressure in the chamber) causing a better absorption of the dressing/sauce itself.

C'est un cycle de travail prégréglé qui permet à la machine d'alterner automatiquement des mini-cycles de vide et réintroduire la pression dans la chambre. Grâce à cette opération l'assaisonnement, qui se trouve à l'intérieur du sachet avec le produit, s'absorbe par les pores de ce dernier qui ont été déjà préparés et ouverts dans la phase de réintroduction de la pression dans la chambre.

Es un ciclo de trabajo ya memorizado que le permite a la maquina de alternar de manera automatica mini ciclos de vacio y restablecer la presiòn adentro de la camara. A traves de esta operacion los poros de los productos envasados en las bolsas con su condimento se abren (cuando en la camara se vuelve a crear presion), que ayuda una mejor absorcion del condimento mismo.

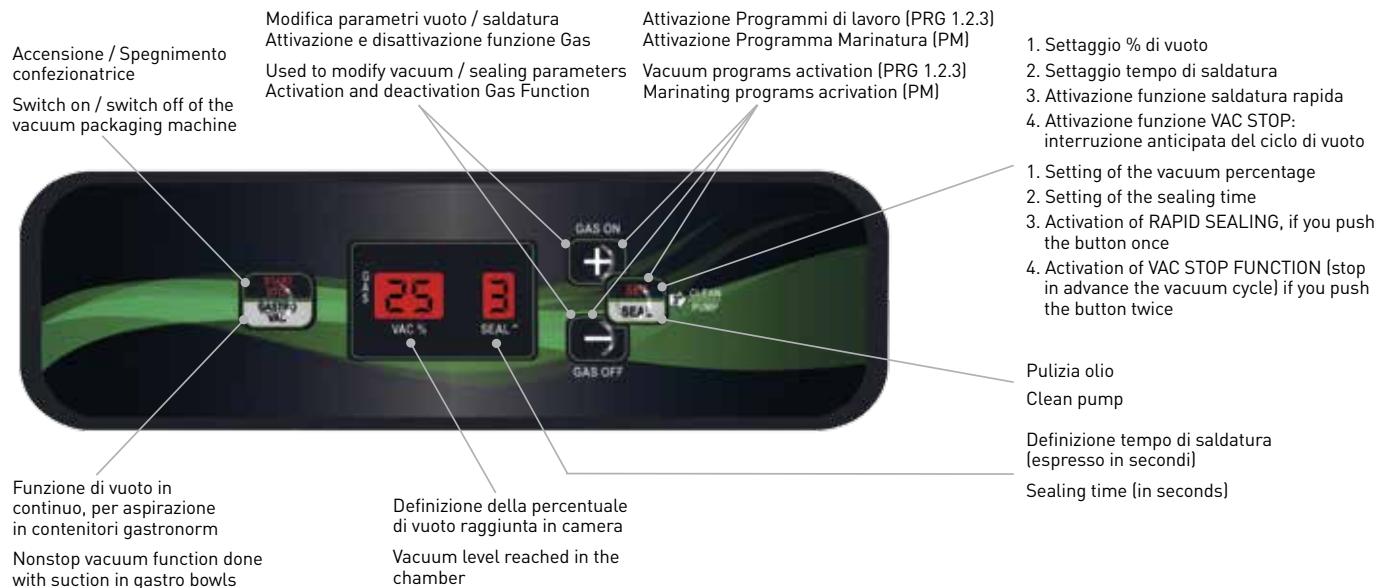

PRESTIGE Series

OPTIONAL

	Gas inerte Inerte gas injection		Saldatura con pistoni senza cavi Cableless piston sealing		Carrello supporto macchina Inox trolley
	Vasca doppia altezza (solo DG 40) Double height chamber (only DG 40)		Piano inclinato per liquidi Inclined plane for liquids		Tensione e frequenza speciale Voltage and special frequency
	Pumpa busch Busch pump		Sistema bloccaggio campana Lid Hook
