## SOFTWARE I USED-
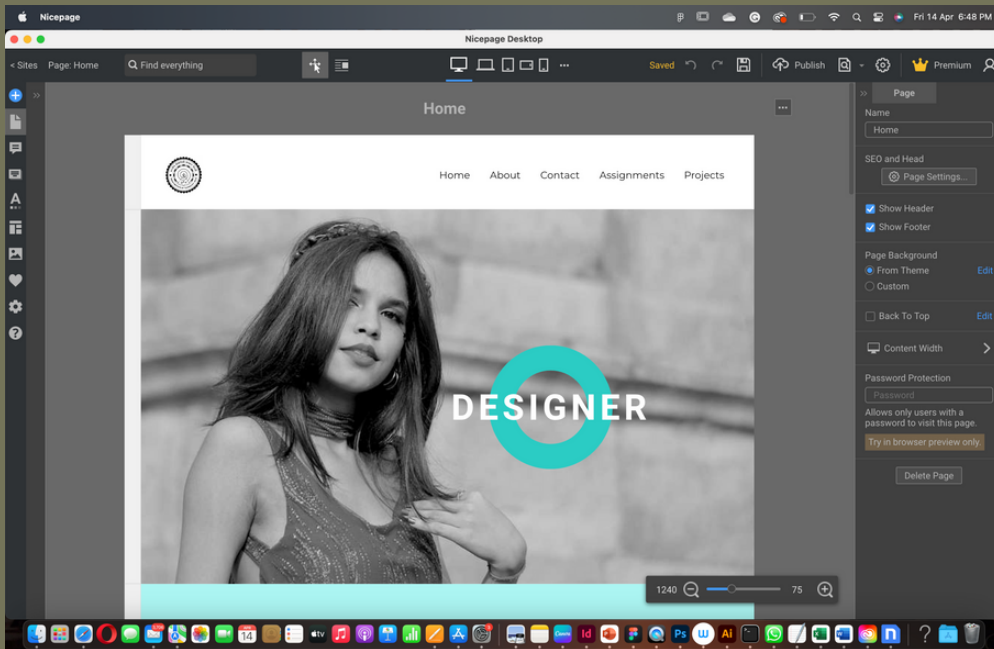

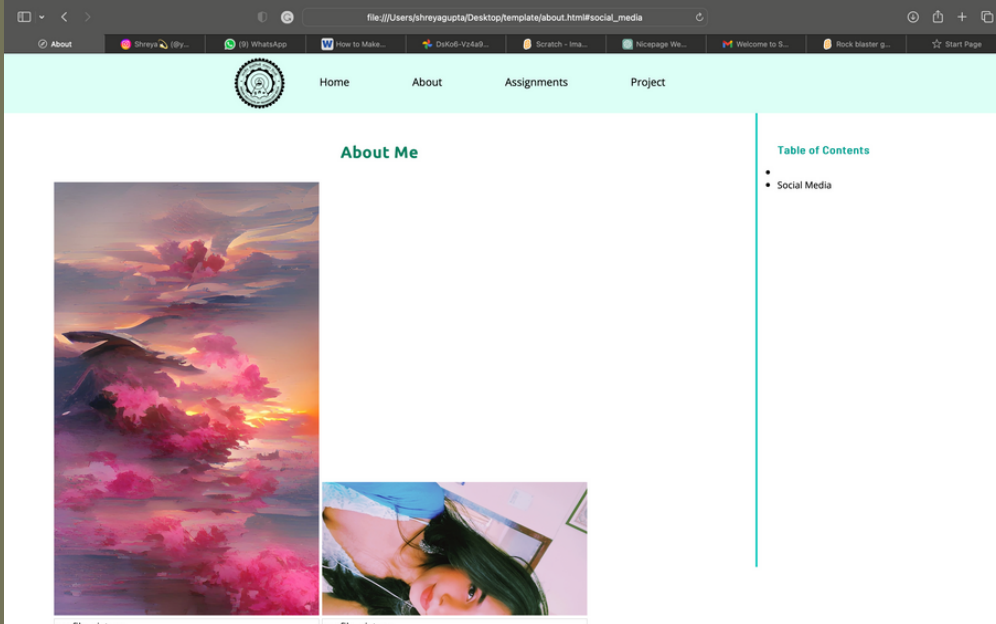

## NICEPAGE.COM

Nicepage is a website builder and design tool that allows users to create professional-looking websites and landing pages without any coding knowledge. It offers a drag-and-drop interface, making it easy to customize and arrange different elements on a web page.

## LEARNINGS

By making my website through nicepage.com, I learned how much technology has grown over the years and how a website can be created without knowing the code and just focusing on UI. Since my interest involves UX/UI, so making a website from interface perspective appealed me more. I played around with different fonts, colour,animations and finally arrived on how i wanted to portray myself through my website

WEBSITE DOCUMENTATION

## SOFTWARE I USED-

### HTML AND CSS TEMPLATE

This website was one of my earlier attempts on making my website. this was solely made by coding. i first wrote the code on sublime text and then published it.

### LEARNINGS

By making this website through coding, it helped me learn the basics of coding, made me understand different terminologies. i faced a lots of challenges as well but simultaneously also learned to solve them. this gave me insights on back end work of a website.
challenges i faced were with orientation of images, some images just did'nt show up, publishing the wesite...but i overcame all of them with time.
